

**Appendix F**  
**2011 Department of the Environment Facility Inspection**

**GOVERNMENT OF THE DISTRICT OF COLUMBIA**  
District Department of the Environment

Natural Resources Administration  
Water Quality Division

**Facility Inspection Form**

**Location:** 5000 Glover Rd., NW Washington, DC  
**Facility Name:** National Park Service Rock Creek Maintenance Yard  
**Date of Investigation:** 1/25/2011  
**Name of Inspector(s):** Jacob Zangrilli; Ibrahim Famuditimi  
**Contact:** Michael Buckler 202-895-6076  
Braxton Braddy and Wes Minter (equipment maintenance) 202-895-6076

---

Inspectors Zangrilli and Famuditimi performed a cursory inspection of 5000 Glover Rd., NW, the Rock Creek National Park's maintenance facility for potential impacts to waters of the District. Inspectors noted that the facility conducts operations which may potentially impact waters of the District including: vehicle and heavy machinery maintenance, vehicle fueling, and pesticide storage. Small quantities of gasoline, and oil for chainsaws and weed whackers were found in several of the storage garages on the property. The facility also stores small amounts of degreasers and solvents.

All potentially harmful fluids were stored in secondary containment at the time of inspection minimizing the potential risk of large scale release to the environment. There did not appear to be any leaks, drips, or spills on the property, and no evidence of pollutant drainage from the property was found. An overpack drum containing spill response material was located next to the secondary containment shed.

Maintenance operations at this facility pose the largest threat to waters of the District. Upon inspection of the maintenance garage, personnel were able to provide waste manifests for all material disposal. The maintenance garage was found to be in excellent condition, with no evidence of improper clean-up or disposal methods.

It was found that the National Park Service is in the process of applying for a multi-sector general permit from the EPA. A copy of their preliminary Stormwater Pollution Prevention Plan was submitted to DDOE. Based upon conditions on site, and the pending MSGP, the Water Quality Division considers the Rock Creek National Park Maintenance Facility to be low priority. Facility should be inspected as an auto service unless operations change significantly.
